

Your session, prepared simply

Thank you for sharing your expertise with the Vizuara community. Participation is voluntary. An existing talk, deck or notebook is welcome.

The audience

Engineers and researchers enrolled in Vizuara workshops. Teach the mechanism from first principles, then show implementation details and tradeoffs. State prerequisites and explain unfamiliar terms.

Your format

30 minutes: introduction, a focused explanation and about 8 minutes of Q&A.

60 minutes: introduction, a technical walkthrough and about 15 minutes of Q&A.

180 minutes: a guided lab, breaks and discussion. Share a tested setup and a fallback for attendees without the required hardware. All activities fit within the booked duration.

Your slides and materials

Use the optional Vizuara slide template or your own deck. Keep one main idea per slide, explain diagrams, show a worked example and include sources. For performance claims, state the hardware, workload, baseline and measurement method. Present only material you are authorised to share.

Before the session

72 hours before: reply to your booking email with your deck or notebook link, a short bio, and any setup instructions. Confirm that the organiser can open the link. There is no required preparation call. If your topic, materials or timing change, reply promptly or use your rescheduling link.

On the day

Join Zoom 10 minutes early to check audio and screen sharing. Rajat will introduce you and hand over. The assigned host will manage the session after that handoff. Keep Q&A inside the booked slot and end on time. Your confirmation email contains the meeting link and timezone.

Recording and follow-up

We will agree whether the session may be recorded, shared with enrolled learners, or published publicly. These are separate permissions. Tell us about employer approval requirements before recording. After the session, share any updated resources by replying to the same email thread.
